History

07/18/2009 08:40 PM - Paul Beckingham

- Status changed from New to Assigned
- Target version changed from 1.8.0 - Kabuto to 2.0.x - Katana
Cannot replicate. Hopefully we'll get a reproducible case.

11/15/2009 10:30 PM - Cory Donnelly

- File *pending.data* added
I'm currently experiencing this issue under v1.8.3. See the attached database.

```
<pre>
$ t long work

ID Project          Pri Added  Started Due    Recur  Age  Tags  Description
40 Recurring_Verify_NYSP_SendXML_transfers  2009-11-14  2009-11-20 biweekly 1 day work-server  sanitized doesn't work
79 Recurring_Pay_bills          2009-11-14  2010-12-30  monthly 1 day home-online home sanitized works
</pre>
```

```
<pre>
$ t recurring

ID Project  Pri Due    Recur  Active Age  Description
79 Recurring_Pay_bills  2010-12-30  monthly 1 day sanitized works
</pre>
```

Note task 40 doesn't appear in the second list.

11/16/2009 10:27 PM - Paul Beckingham

Cory's sample pending.data file does indeed exhibit the bug. Task 40 in the sample file does not have the parent:xxxx attribute, and as such doesn't qualify as a recurring task. Whether or not the filtering logic for selecting recurring tasks is correct, this task once had a parent:xxxx attribute and now does not.

So now we know the symptoms, but still need to determine the cause.
